

DATABASE DEFRAGMENTATION

TARGET YOUR DOMINO DATABASES AND DISK VOLUMES FOR DEFRAGMENTATION WITH THE DEFRAG.NSF APPLICATION FROM PREEMPTIVE CONSULTING.

SOLUTION

If left unchecked, Domino databases will fragment rapidly and sap server I/O performance. Even a slightly fragmented file can cause a 50% decrease in non-cached read performance.

That's why you need Defrag.NSF, the world's first Domino-specific database defragmentation product that runs natively as a Domino server task.

As Bathurst City Council has found, Defrag.NSF significantly improves Domino Server backup times and reduces server I/O.

Defrag.NSF is a Domino server add-in task that allows you to target Domino databases and disk volumes for defragmentation. You can automatically monitor and pre-allocate contiguous free space in your databases during Defrag.NSF maintenance, giving them headroom to grow without scattering data to random sectors of your disks.

You can schedule after-hours defragmentation, run Fix-ups and database Compacts by simply ticking a box. Better still, you can configure Defrag.NSF to automatically integrate the running of these tasks and perform maintenance on selected databases – just set and forget.

Defrag.NSF has a number of great features, including ease of installation (it's a Notes database), a defragmentation engine that can defrag multi-gigabyte databases in seconds, and the ability to defrag databases where there is very little free space.

It has a new multi-stage defragmentation process that automatically switches between file and volume level defragmentation when required, free space consolidation, and 1-click generation of free space reports showing the largest contiguous free space area on your disks.

There's also integration into the Defrag.NSF Enterprise Console (available on request) for widespread 1-click deployment, mail-in reporting and upgrade automation.

And you can perform all of these tasks from the familiar Domino Administrator Client user interface.

REPUTATION

Preemptive Consulting is a Canberra-based IBM Business Partner that specialises in providing innovative email management solutions for Domino and Exchange.

The company's unique services and products help organisations to regain control of their email environment, while reducing their total cost of ownership.

Preemptive Consulting is an SME Australian Government Endorsed Supplier.
